                                                                                                                                                                                                                 The invention relates to an isolated polypeptide comprising a death CC domain (DD), death effector domain (DD) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain, by contacting a DD protein) or NB-ARC Contacting a DD protein). DED or NB-ARC domain for moments and CC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED or NB-ARC CC NIDD (NGFR-interacting Death Domain), with a candidate binding agent, or chemical crosslinking, nuclear magnetic resonance (NMR), mass content of two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC interpretation (MS) and FPA. The invention is useful for modulating the CC level of a cell process such as cell proliferation, cell adhesion, cell immunoglobulin class switching, in particular apoptosis within a cell. CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CC invention is useful for modulating the activity of oncogenic proteins. The protein and antibody specific for it are useful for creating bacterial infections by modulating the activity of bacterial CC proteins. The protein and antibody specific for it are useful for it suseful for treating immune-based pathologies, pathologies associated CC with cell division, inflammatory diseases such as sepsis, fibrosis, cc therapy and gene therapy. The present security is useful for atherapy and gene therapy. The present security is useful for artivity of pathologies.
                                                                     US-10-001-254-16 (1-460)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polypeptide comprising a death domain or death effector domain, useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other diseases

The present sequence is a cDNA encoding human interleukin (II)-1 recept associated kinase (IRAK)-4. IRAK associate with activated II-1, II-18 and other receptors and act to transduce signals originating from the activated receptors, ultimately leading to a variety of downstream effects such as nuclear factor (NF)-kappaB activation. The IRAK-4 inhibitors are useful for treating inflammatory diseases such as pulmonary diseases and diseases of the airway (e.g., adult respiratory

CC pulmonary fibrosis, interstitial lung disease, asthma, chronic cough CC or allergic rhinitis), transplant rejection, autoimmune diseases (e.g., CC rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis CC or diabetes), cancer (e.g., solid tumours, skin cancer or lymphoma), CC cardiovascular diseases (e.g., stroke and atherosclerosis), diseases CC of the central nervous system (e.g., neurodegenerative disease), CD14 CC mediated sepsis, non-CD14 mediated sepsis, osteoarthritis, osteoprosis, CC psoriasis, diseases of the skin (e.g., rash, contact dermatitis, atopic CC dermatitis), inflammatory bowel disease (e.g., Crohn's disease and CC culcarative colitis), Behcet's syndrome, antylosing spondylitis, gout, Sarcoidosis and ophthalmic diseases and conditions. The inhibitors of CC rank-4 activity or expression are used to inhibit signal transduction CC resulting from the activation of an interleukin-1 receptor (IL-IR)/Toll receptor in a cell. They also inhibit the activation of a transcription CC ractor that activates NFkappaB in the cell. IRAK-4 is used to create a conditions and conditions and for the study of inflammatory CC disorders and conditions and for the development of potential treatments for IRAK-4 related in flammatory diseases and conditions. CC domain (DD), death effector domain (DED) or NB-ARC domain. The invention contribution (DED) or NB-ARC domain. The invention contribution is useful for identifying a binding agent, preferably a protein or a drug contribution of the binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC comain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED or NB-ARC contribution of the domain and the candidate binding agent, by yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or chemical crosslinking, nuclear magnetic resonance (NMR), mass contention is useful for modulating the contibution of a cell process such as cell proliferation, cell adhesion, cell immunoglobulin class switching, in particular apoptosis within a cell. Cc immunoglobulin class switching, in particular apoptosis within a cell. Cc muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the crownian. The protein is useful for modulating the activity of nocogenic proteins. The contribution is useful for modulating the activity of nocogenic proteins. The protein and antibody specific for it are useful for cc treating bacterial infections by modulating the activity of bacterial contribution. Inflammatory diseases such as sepsis, fibrosis, autoimmunity, allograft rejection and other diseases. The protein contribution, inflammatory diseases such as sepsis, fibrosis, arthritis, graft versus host disease. The invention is used in antisense cc ct therapy and gene therapy. The present sequence is human IRAK4 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polypeptide comprising a death domain or death effector domain, useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Reed JC, Godzik A, Stenner-liewen F;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               17-NOV-2000; 2000US-0715893.

```

The present sequence is a cDNA encoding mouse interleukin (IL)-1 recept associated kinase (IRAK)-4. IRAK associate with activated IL-1, IL-18 and other receptors and act to transduce signals originating from the activated receptors, ultimately leading to a variety of downstream effects such as nuclear factor (NF)-kappaB activation. The IRAK-4 inhibitors are useful for treating inflammatory diseases such as pulmonary diseases and diseases of the airway (e.g., adult respiratory disease syndrome (ARDS), chronic obstructive pulmonary disease (OPD), pulmonary fibrosis, interstitial lung disease, asthma, chronic cough or allergic rhinitis), transplant rejection, autoimmune diseases (e.g., (IL)-1 receptor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cc cardiovascular diseases (e.g., solid tumours, skin cancer or lymphoma), cc cardiovascular diseases (e.g., stroke and atherosclerosis), diseases cof the central nervous system (e.g., neurodegenerative diseases), CD14 cc mediated sepsis, non-CD14 mediated sepsis, osteoarthritis, osteoprosis, cc psoriasis, diseases of the skin (e.g., rash, contact dermatitis, atopic dermatitis), inflammatory bowel disease (e.g., Crohn's disease and conditions. The inhibitors of context dermatitis, gout, cc sarcoidosis and ophthalmic diseases and conditions. The inhibitors of cractor activity or expression are used to inhibit signal transduction cc receptor in a cell. They also inhibit the activation of a transcription cc factor that activates wikappas in the cell. IRAK-4 is used to create a cc nonhuman transgenic animal which is useful for testing the function of conditions and conditions and for the study of inflammatory cc disorders and conditions and for the development of potential treatments cc for IRAK-4 related inflammatory diseases and conditions. IRAK-4 sequences cc are also used in gene therapy and in antisense therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1542 BP; 421 A; 392 C;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are useful for the seful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAH13632 to AAH13632, all of which are used in the exemplification of the numer times.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ota T,

                                                                                                                                                                                            US-10-001-254-16 (1-460) x AAS76805 (1-1668)
                                                                                                                                                                                                                                                                                        Score:
                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. (CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC anino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed contribution, but was obtained in electronic format directly from WIPO CC at fer, wino, intrub/published not segmences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess highly responsible.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       31-MAR-2000;

The genes encode cancer associated antigen precursors. These gene products are useful in methods for preventing, diagnosing and/or treating disorders, especially cancer, associated with abnormal expression of human cancer associated antigens. The method comprises contacting a sample from a subject with an agent that specifically binds to the nucleic acid molecule or expression product specifically binds to the nucleic acid molecule or expression product

(I) and polypeptides (III) encoded (I) are used to treat a medical conditions and in diagnosis of a gathological condition. Disorders which are diagnosed or treated include constituen. Disorders which are diagnosed or treated include cardiname diseases e.g. rheumatoid arthritis, hyperproliferative conditions and in claude autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative conscious cardiac arrest, cerebrovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. and function caused by bacteria, viruses conscious infection, gastrointestinal disorders e.g. dysphagia, corneal infection, and crimatorine disorders e.g. diabetes can pituitary dwarfism, cancers and disorders at the cellular level e.g. corneal infection. The polypeptides can also be used disorders e.g. myocardial corneave transplantation, for supporting due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The colypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein,
                                                                                                                                                                                                     Percent Similarity:

(I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosis of a gathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative (C disorders e.g. neoplasms of the breast or liver, cardiovascular disorders (e.g. cardiac arrest, cerebrovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders (c e.g. cardiac arrest, cerebrovascular disorders e.g. labheimer's disease and C amylotrophic lateral sclerosis, infections caused by bacteria, viruses (e.g. corneal infection, gastrointestinal disorders e.g. dysphagia, (c adenocarcinomas and irritable bowel syndrome, reproductive system (c disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes and pituitary dwarfism, cancers and disorders at the cellular level e.g. (c respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cardial celluration. The polypeptides can also be used to aid wound healing and (c epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABL90822
                                                                                                                                                                                                        (ABBB9040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (anti-agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial isohaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
                                                                                                                       Sequence 1181
                                                                                                                                             Note: The sequence data for this patent did not form part printed specification, but was obtained in electronic form from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                        epilepsy; and (f) intecti
and parasitic infections.

AAB63221 to AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,

Claim 50; Page 303; 799pp; English

ġ

represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively.

AAB63232 to AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence production. CAAPs have cytostatic activity and can be used in the prospectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic actis or anti-CAAP antibodies are useful for diagnosing and treating a AAF22422 to AAF22626, AAF22627 to AAF22773 and AAF22774 to AAF23014 condition characterised by expression of an abnormal amount of a protein,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     В
The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the CC coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to a coligonucleotide which comprises a 3'-end sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC cligonucleotide comprises a selected from those defined in CC the 5'-end sequence). The primers sets can be used in antisense therapy and CC in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by CC detection and/or diagnosis of the abnormality of the proteins encoded by CC daylisas asily without any specialised methods. AAH03166 to AAH13628 and CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
